**36" x 16ft Sample
36" x 35ft
42" x 35ft
50" x 35ft**

PRISMJET™

7mil Backlit Film

PrismJET 7mil Backlit Film is a traditional backlit substrate compatible with Eco-Solvent and Solvent-based inkjet printers. It has been specifically tested, profiled and certified for use with SignWarehouse PrismJET VJ, PrismJET EXtra, and Mutoh ValueJET printers. It is also compatible with printers using Roland EcoSol Max inks.

It is especially ideal for both photographic and graphic signage applications because of its capacity to replicate colors from a very wide color gamut.

This front print semi-matte backlit film offers maximum color density with vivid and high output resolution for any image. The advanced ink adhesion technology achieves excellent color reproduction and saturation, while a higher percentage of translucency allows the brilliance to shine through.

PrismJET 7mil Backlit Film is the optimal choice for your specific backlit signage and graphics applications.
