

Corel Draw x4 – Changing Color Palette

This document will show you how to change your color palette from CYMK to RGB or vice versa. There are certain processes for certain equipment that requires exact colors for it operate correctly. This will ensure that reds are truly red and your blues are truly blue for your specific equipment. (i.e. All laser engravers need to be ran with an RGB color palette)

1. Open your Corel Draw software.
Click Tools, then Palette Editor.

- In the Palette Editor, press the down arrow, choose the color scheme you need (RGB or CMYK). Then click OK.
(All laser engravers need to be ran with an RGB color palette)

- Back in the software, to make this a permanent change, click Tools, then Save Settings as Default.
